Union Metropolitan Park,
Union, N.J. 07083.
U.S.A.

DELFT, 17th September 1975

Dear Mr. Kuehni,

You will be informed that CIE TC-1.3 has accepted the proposal to recommend Luv and Lab for adoption. This is what was to be expected. There were 13 votes in favour, 3 against (France, Germany, U.S.A.) and 1 abstaining.

The Dutch industry had advised me to vote in favour to promote uniform practice, although they are aware of the fact that these formulae are not optimal. I had to respect this view also my personal feeling is very much against it.

I was not very happy with the procedure in the sessions.

19 comments and contributions regarding this subject had been handed in, but they were not distributed, nor will they be added to the minutes. So these comments had no influence at all. As I lost in London the copy of your report to CIE I would be most thankful for sending me another one.

MacAdam was very doubtful whether it will be possible to replace this standardization in case a better formula will turn up.

Nevertheless I will go on.

The computerprogram which I needed for analysis has been realised in between. So I am hopeful I can realise in the near future the aims which I have in mind.

With best regards
Sincerely,
Fibre Research Institute TNO

(Drs. L.F.C. Friele)
