Mr. Rolf G. Kuehni
Editor of Color Research and Application
Dyes and Pigments Division, Mobay Corporation
Rock Hill Industrial Park
P.O. Drawer 2855 CRS
Rock Hill, South Carolina 29731

Dear Rolf:

Thank you for your kind letter of January 21. I was really surprised when I was notified from Dr. Trestiege about the honor. Enclosed are my vita and the first draft of citations which has been sent to Dr. Trestiege from the Color Science Association of Japan. Please keep in mind that the conferment of award will be at the forthcoming AIC conference, and the draft will be changed or completely rewritten.

The article "Multidimensional studies of Munsell color solid", the manuscript which had been sent to you before, has appeared in Psychological Review, 1988, 32, 259-284. I have not received the reprints yet. I am thinking of preparing a manuscript to review a problem which has not been covered in that article: role and location of principal hue axes such as 5R, 5Y, etc. in the Munsell color space. Certainly, C R & A is a possible outlet for that manuscript. On the other hand, I have already started to organize a manuscript about a methodological problem on how to define in the x,y,Y space discrimination ellipsoids for surface colors. It includes a number of application examples. I would like to submit this to our journal and it will be before this summer.

I now have a submitted manuscript by Boynton et al. Please allow me 10 more days to process it.

Sincerely Yours

A handwritten signature in cursive script that reads "Tarow Indow".
